Notes to support the table

The industry is committed to reporting as quickly as practically possible, some one month in arrears.

"Monthly mortality (%)" = the percentage of fish lost on each farm within each month. This is reported as a percentage of the total number of fish on the farm each month. This is the measure of mortality used by the Scottish Government's Fish Health Inspectorate when assessing the health of the fish on the farm.

Further analysis shows that the overall monthly mortality for the industry was:

It can only be reported once the entire farm has been fully harvested and fallowed.

Cumulative mortality refers to mortality over the seawater production cycle. Therefore, an industry-wide figure can only be calculated once all fish from a specific generation or year class have been harvested. It usually takes 2 years to rear a salmon to harvest.

"Fallow" = the farm was fallow or empty throughout the entire reporting month.

"Farm stocked in Dec." = the farm was fallow or empty at the start of the month but was restocked during the month.

"Farm fallowed in Dec." = the farm was stocked at the start of the month but became fallow or empty during that month.

"In production" = the farm is stocked and a cumulative mortality figure will be reported once all fish are harvested.

"Farm fallowed - fish not harvested" = The farm became fallow, but not because the fish were harvested. e.g. the fish may have been moved to another farm.

Mortality Categories

Mortality categories presented in this report align with those of the Scottish Government's Farmed Fish Health Framework initiative.

Smolt and Transfer - *Mortalities as a result of transfer or complications with smoltification.*

Predation - Mortalities primarily due to seal or bird attacks as well as other predator related losses.

Jellyfish / plankton - Physical algal damage and jellyfish stings.

Environment - Physico-chemical impacts (i.e., not biological).

Viral disease - All mortalities related to viral challenges.

Bacterial disease - All mortalities related to bacterial challenges.

Handling - Damage resulting from essential physical handling.

Sea lice management - Any mortalities that are due to sea lice management e.g., treatments.

Gill health related - *Any mortalities linked to gill health or gill health management e.g., treatments.*

Other - Any other cause of mortality.

Statistics for December 2024

There are 210 active salmon farms in Scotland.

Of these, 130 (or 62%) were stocked at some point during December 2024.

This means 80 (or 38%) of active farms were fallow or empty throughout December 2024.

Corrections in December 2024

In November:

Holm of Gruting was reported as stocked. Duplication error from Bow of Hascosay. Thus in November: - # sites stocked were 131, and number fallow 77

- sector monthly survival % remains correct

Quanterness was reported In Production; but was "Farm fallowed - fish not harvested"
